

The Science Behind CGTI

Each year, CGTI evaluates the effectiveness, longevity and overall success of our programming. Through surveys given before and after our summer conference and after our winter conference, our youth tell us what they expect from us and how we've delivered. Check out below what our participant leaders are saying about the impact of attending CGTI conferences!

Creating An Impact

100% of CGTI attendees feel that they are capable of creating positive change in our communities. Every participant leaves CGTI events with an understanding of the Strategic Prevention Framework (SPF), which provides them the tools to create change that is effective, efficient and evaluated. 98% of attendees believe that action plan will make a tangible impact over the school year.

Owning Your Confidence

CGTI participants show an increased belief in their ability to problem solve, communicate effectively, discuss about critical topics with others and try new things after attending CGTI events. 99% believe that because they attended CGTI, they have developed and increased their overall leadership skills, including their abilities to communicate and plan effectively.

Making Healthy Decisions

100% of participants leave CGTI with an action plan that targets issues in their communities! These plans include substance use prevention education and mental health awareness, bullying prevention, community engagement and more. 99% of attendees leave CGTI feeling confident that they can talk about the dangers of substance use and not partake in any substance use themselves.

Positive Core Values

Overall, CGTI attendees show great tenacity, passion and dedication in being catalysts for positive change in their communities while committing to their own leadership development and growth. 95% are committed to helping others and feel confident they can set goals and achieve them.
